

Targets/Goals:

Students will learn about and use variables and *constants* (identifiers) in programs.

CONSTANTS

int a = 6; // declare & initialize

const int conA = 7;

const float PI = 3.14159;

const int B = 3;

PI = 3; // error

Vocabulary

data type → int, char,
(float) double

identifier → variable, constant

```
int A = 6;
```

```
Console.WriteLine("A = " + A);
```

```
Console.WriteLine("A = {0}", A);
```

```
Console.WriteLine($"A = {A}");
```

`float alpha = 1.23456;`

const float c = 3.0e8;

↑ ↓ ↗
3.0 x/0 power
3.0 x 10⁽⁸⁾

~~const float c = 3.0 * 10e8;~~

```
const char sgrsym = 251;
```

By the end (exit):

Start a program using at least one constant and push to GitHub.
